FRIDAY, APRIL 1, 2011

Selling
**100 YEARLING BULLS
40 COMMERCIAL HEIFERS**

- Free Breeding Injury Guarantee
- Carcass Ultrasound
- Herd has Been Tested Free of BVD
- Free Grilled CAB Lunch at 11:30 am Sale Day

Thiessen's REGENCY ACRES

Welcome to the 2011 REGENCY ACRES annual production sale.

It is our pleasure to invite you to be our guest on Friday April 1st for lunch at 11:30 A.M. with the sale to follow at 1 P.M. Come early and enjoy doughnuts and coffee while you browse through the bulls and heifers. As always, you are welcome to stop by the ranch anytime before March 30th to look through the cattle. We would be happy to show you through the bulls and the cows behind them.

Regency Acres has been raising registered Angus for 54 years now. That's a lot of years and generations of education and experience. Some of those experiences have not been so pleasant. It has been said that the best experience comes from your worst mistakes. As we get older and hopefully wiser, the most important thing we have learned is it is easier to have your cattle work for you and not the other way around. Intelligence and a quiet disposition are probably the two most labor-saving traits a rancher can have in their herd.

A smart calm cow doesn't spook the herd when your dog goes chasing that rabbit through the corral; a smart, calm cow mothers her newborn calf and gets it up and sucking; a smart calm cow knows where her calf is and doesn't go chasing after every calf in the pasture while her's follows behind; a smart calm cow doesn't try to tenderize you as you are trying to get that newborn in the sled to pull it into the barn on a -20° night.

The less work your cows create for you, the more time you have to do other things, whether it be basketball games, cleaning the shop or that nagging honey-do list! At Regency Acres we not only cull based on fertility, performance, structure and maternal ability (calving ease, udder, vigor, calf performance), but also on intelligence and disposition. These cattle are the result of a no-nonsense program. If they fail in any of these criteria, they are removed from the herd regardless of how they did in any of the other categories. We do not tolerate cattle that are an economical burden.

The bulls selling were developed on a high-roughage ration designed for a 2.75-lb. gain. This allows the bulls to develop and grow at their own pace without causing structural damage. They will be carcass ultrasounded and fertility tested prior to the sale. Ultrasound data will be available sale day.

If you feel there is a trait you need to add to your herd, feel free to contact Russ or Jim prior to the sale. We have computers and notebooks filled with records that go back many years that we can resource from.

Thank you for taking the time to go through the catalog and we look forward to seeing you at the sale.

Trucking:

Free delivery within 500 miles on any bull selling for more than \$2,000 per lot or more, or a total purchase of \$3,000 or more. All other deliveries at actual cost. A \$100 credit per bull will be given if the buyer picks up their animal(s) on sale day.

Terms & Conditions:

All cattle are to be settled for sale day unless prior arrangements have been made. Please leave specific instructions in writing for transfer and shipping. Each animal will be sold to the highest bidder with the auctioneer settling any disputes as to bids. Announcements made from the auction block take precedence over any printed material. The cattle sell under the suggested terms and conditions as adopted by the American Angus Association.

Herd Health:

All cattle will be accompanied with proper health papers for immediate shipment within the continental United States. All sale animals are calfhood vaccinated, including 7-Way, IBR, BVD, P13 and Pasteurilla. The heifers had a BVD booster and a Letpo-Vibrio shot this spring.

Breeding Bull/Injury Guarantee:

All bulls selling for \$2,000 or more are guaranteed against breeding injury for the first breeding season. Breeding season is defined as the 90-day period following the first turn-out of the bulls. If a replacement bull is available, he will be provided, or, if the buyer prefers, a credit will be given in the following year's sale less salvage value of the injured bull. Regency reserves the right to have the injured bull inspected by a veterinary of our choice. **Regency Acres must be notified within 30 days of the injury and no later than October 1.**

Fertility:

Complete semen evaluations have been conducted by Scott Spickard, World West Sires. Exam reports are available for inspection. Measurements and guarantees are no compensation for an infertile bull and cows not settled.

Ultrasound:

The bulls have been ultrasounded for ribeye, marbling and back fat measurements by Matt Lane. This information will be available on sale day.

Note:

Buyers unable to attend the sale may send or phone their bids to the auctioneer, the representatives, Jim or Russ. See sight-unseen bull purchase guarantee on page 2 of the catalog.

When you buy from Regency you get ...

The Bull Injury Guarantee

Regency Acres is providing a first-breeding-season injury guarantee on all bulls selling for \$2,000 or more. The first breeding season is defined as the 90-day period following the first turn-out of the bulls. If a replacement is available, he will be provided. If the buyer prefers, credit will be given in the following year's sale, less salvage value of the injured bull. Regency reserves the right to have the injured bull inspected by a veterinary of our choice. **Regency Acres must be notified within 30 days of the injury and no later than Oct. 1.**

Tested BVD-Free

The entire Regency Acres herd has been tested FREE of Persistent BVD Infection. Anxiety about this disease that causes abortion and other problems convinced us to do the test. An animal can appear healthy and still be a persistently infected carrier of BVD and spread disease. In fact, it has been said that some feedlots will not be accepting cattle that have not been tested free of BVD.

Genetic Defects

All cattle selling are free of the genetic defects Arthrogryposis Multiplex (AM), Neuropathic Hydrocephalus (NH) and Contractural Arachnodactyl (CA). For more information on these genetic defects, visit the American Angus Association's website at www.angus.org.

Fertility and Physical Exam

Complete semen evaluations have been conducted by Scott Spickard, World West Sires. Exam reports are available for inspection. Measurements and guarantees are no compensation for infertile bulls and open cows.

Free Delivery

Free delivery up to 500 miles on bulls selling for \$2,000 per lot or more, or, a total purchase of \$3,000 or more. All other purchases will be delivered at cost. A \$100 credit per bull will be given if you take your purchases home with you sale day. If you prefer, we will take your bull home and feed him for free until May 1. After May 1, we will feed the bulls at \$2.50/head/day until you come and get him. Please make it clear what you want done with your new purchase when you settle up at the front desk. Commercial heifers are the responsibility of the buyer as soon as sold.

Sight-Unseen Purchase Guarantee

Buyers unable to attend the sale may call or send their bids in to Russ, Jim or any of the representatives listed. If the bull(s) purchased are not as presented, the purchased bull(s) can be returned to Regency Acres at no cost to the buyer.

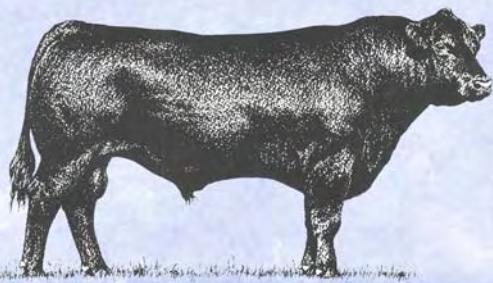

Helpful Hints for Care of Herdbulls ...

Having herd bulls adapt to the environment they will be in is very important to the success of a breeding program. Whenever possible, the bulls should be fed the same type of forage they will eat in the breeding pasture for a minimum of two weeks before turn out. Their rumen operates with little bugs to break down the diet and different forages each have their own little bugs. About two weeks is the time required for the rumen to adjust to a different diet. When a bull is turned out, he isn't

thinking much about eating, so any advantage that you can give him will be beneficial to younger bulls.

Another trick for having a virgin bull ready is what we call "Jump-starting." If you have a cow or a heifer around that is cycling, put the bull with her. If he seems disinterested, put another bull in with the cow for him to observe. This should trigger his brain. When the bull appears interested, let him in and remove the other bull. Make sure a bigger bull doesn't start whipping on him, or that could defeat what you are trying to accomplish. It is rare that this procedure is necessary, but it is good insurance and, once the bull gets a taste of what his job is, he will be ready for those heifers.

When breeding season is finished, a reconditioning program for yearling bulls is good as they change their teeth at 18 to 24 months of age.

Predicting the Future with EPDs

An Expected Progeny Difference (EPD) is a prediction of how future progeny of a sire are expected to perform in various production and carcass traits which are measured. EPDs are expressed in actual pounds, square inches or centimeters (depending on the trait), plus or minus, that you can expect in the weights or carcass measurements of progeny sired by a particular bull as compared with another bull. The EPDs of the bulls listed in this sale book can be compared to each other, as well as other Angus bulls. The average EPDs for non-parent bulls of the Angus breed are:

| PERFORMANCE EPDS | | | | | CARCASS EPDS | | | |
|------------------|------|-----|-----|-----|--------------|------|-----|------|
| CED | BW | WW | YW | SC | MILK | MARB | RE | FAT |
| +5 | +2.0 | +46 | +83 | .42 | +22 | .41 | .19 | .012 |

The EPD information was derived from the 2010 Spring National Angus Evaluation conducted by the American Angus Association. Please ask if you need assistance in understanding EPDs.

Each EPD has an accuracy value (acc) which measures the reliability of the EPD. The higher the accuracy, the greater the reliability of the EPD and the less it would be expected to change.

Performance Definitions and Examples

Adjusted 205-Day Weaning Weight

Weaning weight adjusted to 205 days of age and for age of dam.

Adjusted 365-Day Yearling Weight

Off-test weight and height adjustment to 365 days of age.

Adjusted Yearling Scrotal

Off-test scrotal circumference (cm) adjusted to 365 days of age.

Calving Ease Direct (CED)

Is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD

Gives an indication of calving ease. Birth Weight EPD predicts the birth weight difference one can expect from any two sires. When bred to genetically similar groups of cows, a bull with a Birth Weight EPD of +8.0 should sire calves with an average birth weight 5 lbs. heavier than a bull with a Birth Weight EPD of +3.0. Experience has shown that an Angus bull with a Birth Weight EPD of +2.5 or less can be used on first-calf heifers with a minimum of calving problems.

Weaning Weight EPD

A prediction of a bull's ability to transmit weaning growth to his progeny. For example, Bull A has a Weaning EPD of +30 lbs. Bull B has a Weaning EPD of +10 lbs. At weaning, Bull A's calves will average 20 lbs. heavier.

Milk EPD

Expressed in pounds of weaning weight that result from the amount of milk produced by daughters of a particular bull as com-

pared to the daughters of other bulls. If Bull A is +15 for Milk and Bull B is +5, Bull A's daughter's calves will weigh 10 lbs. heavier at weaning due to her superior milking ability.

Yearling EPD

Yearling Weight EPD takes into account both pre-weaning and post-weaning growth. Yearling weight is the most heritable of all growth traits. You can expect bulls with high yearling EPDs to produce fast-gaining calves. If Bull A has a Yearling EPD of +60 and Bull B has a Yearling EPD of +30, Bull A's calves will average 30 lbs. heavier than Bull B's at one year of age.

%IMF EPD

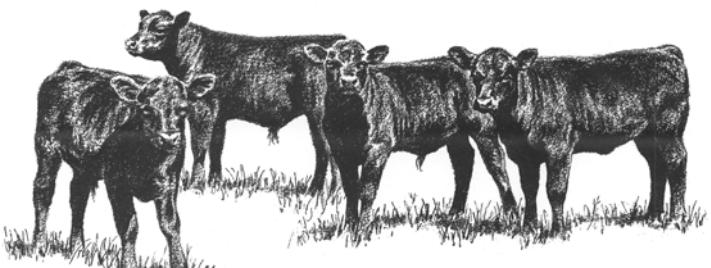

Predicts the difference in sires' progeny for percent intramuscular fat in the ribeye muscle, compared to other sires.

Ribeye Area EPD

Predicts the difference in ribeye area of a bull's progeny compared to progeny of all other bulls evaluated at a given endpoint. Reported in square inches.

Fat Thickness EPD

Predicts the difference in fat thickness, measured between the 12th and 13th ribs of a bull's progeny compared to progeny of all other bulls evaluated. Reported in inches.

Spectre is one of those bulls that you just keep going back to. His daughters are some of the best we have produced. While Spectre's "numbers" aren't up to todays standards, his progeny continue to outperform the "performance" bulls. They are very consistent, have tremendous vigor, and exhibit good carcass traits.

Reich Lead On 424 is a moderate-framed son of the famous Connealy Lead On. 424 produces progeny that calve easily, are made right, show excellent muscling pattern and depth of rib, all while maintaining a smaller frame size. 424 catches the attention of all who visit the ranch.

W5 was the second high-selling bull in our 2009 sale and is one of the thickest sons of Reich Lead On we have ever produced. His progeny come easy and early, and are very stylish. His dam is one of our best with progeny ratios of 3BR92, 3WR106 and 2YR109. Owned with Bar JV Angus and Dale Vitt.

With a pedigree stacked with some of the breeds most recognized female producers, 7164 sires very attractive, gentle and productive females and powerful range bulls. He combines calving ease and very mild disposition with depth of body that is second to no other bull we've seen. His sons have been one of the highest selling sire groups at both Lunds B Bar and Regency Acres since they debuted in 2007. Owned with Lunds B Bar Angus and Sitz Angus.

No stranger to the RA program, Nebraska has proven himself as one of the better bulls we have owned. Nebraska's progeny are easy calving, high performing, well muscled, thick topped and moderate framed.

His daughters have a combined progeny ratio of 96 on birth, 103 on weaning and 102 on yearling.
