Complimentary Lunch by Unison Bank & Hubbard Feeds.

Delivery and Feeding: Free delivery up to 200 miles after that we will work with you to keep the cost down. Or bring your trailer and deduct \$30 per bull. We will deliver the bulls right after the sale. If you wish we take them home and feed them for awhile, we can for \$3 a day.

Absentee Bids: We can handle any bids either on the phone or in strict confidence. Please call before the sale to set this up.

Guarantee: Unconditional guarantee goes along with these cattle. If there is a problem, we will fix it!

Semen Test: Bulls have not been semen tested but they are fully guaranteed. We advise to test the bulls at a later date. If a problem were to arise, we will stand behind the bulls 100% and we will either replace the bull or give credit for next year's sale.

Registration: All bulls and females are registered. Papers will be transferred at the seller's expense.

Herd Health: Any health papers that need to be issued can be done so by a veterinarian.

Terms: Cash or checks will be accepted.

Liabilities: Anyone attending the sale will do so at their own risk.

Volume Discounts: Discount of \$300 will be given on the fourth bull purchased by the same ranch.

Please join us for after-sale hospitality!

You can watch the sale LIVE!

Go to napoleonlivestock.com and click on the Live Auction tab. If you want to bid, you will need to register prior to the sale. It's easy to do and they will walk you through it.

Welcome

Heather, Laurie, Jessica, Troy & Curtis Brown

Welcome to our Annual Production sale.

It is our pleasure to be able to offer these cattle for your evaluation. We feel these cattle will provide you with the best seedstock to allow you to raise the type of calves that today's market is looking for. Charolais feeder calves are in high demand and short supply according to feeder buyers across the country. High-quality bulls that we offer here today we feel will sire those calves that are in high demand. These bulls are bred for calving ease, performance, disposition and eye appeal.

Our fall yearlings are impressive again this year. All but one are sired by Top shelf. These bulls will offer a little more capability to service more cows the first season. Our yearlings are a very strong group also this year. For which they will offer a few for calving ease on heifers and also performance bulls to add to your cowherd. The open heifers are a very feminine group of future brood cows that will go on and add to your herd to produce top quality for years. Our offering of the commercial pairs are small in numbers this year but are of very high quality. They will make excellent cows for anyone's herd.

We take pride in our cattle and we have a very rigid culling standard so you can count on these cattle to go out and perform with the best. We also have stressed in the past, we are here after the sale too. We want satisfied customers and will work our hardest to achieve that goal.

Please join us on March 24th at 5:30 p.m. We will be serving a lunch before the sale so come early. Thank you for your interest and support of our cattle and our program.

Sincerely,

Curtis Brown

Our main herd sire that just keeps on ticking. Makes them good and makes them full of meat. And is making some nice females too, besides what his Milk EPDs say. His progeny are being well accepted by top commercial cattlemen. Very attractive and easy-fleshing progeny.

Strong breeder we used on heifers. There are some of his calves that will work on heifers too. Performed pretty good on heifers.

LT Next Stage 3238 is a upcoming herdsire.

Fall round-up underway

Commercial Females

We will be selling 12 Red Angus-cross first-calf heifers with Charolais-cross calves at side. Calves are all out of Bluegrass sons and tagged to match their dams. Calves were born the first half of February and will have a Draxxin shot before they come to the sale just for a precautionary measure. We have purchased most of these heifers from the same ranch in previous years and feel they will make outstanding brood cows as their calves will show it on sale day. These heifers were purchased from reputable herds in the area.

Heifers were poured with Dectomax and vaccinated with Virasheild 6 VL5 in the fall.

We will sell them 5 or more gate cut.

A sample of the commercial females offered in this year's sale.

This bull would work on heifers of any breed. Calving ease on the top and bottom of his pedigree.

Fall bulls' birthweights will all read 90 lbs. from the AICA, because they need some kind of weight to put in their adjustments. The fall cows are calved in a quarter of pasture 2 miles from the ranch. We don't weigh them at birth for that reason. They generally run lighter than the spring.

9.6	-3.2	29	46	3	8.0	18

Out of a heifer. This bull is gaining over 4.3 per day. Good YW too.

AICA EPD Guide

Calving Ease Direct (CE) is expressed as a difference in percentage of unassisted births in first calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's calves will be born when bred to first-calf heifers.

Birth Weight EPD (BW) The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

Calving Ease Maternal (MCE) is expressed as a difference in percentage of unassisted births in first calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Weaning Weight EPD (WWT) The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

Yearling Weight EPD (YW) The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

Maternal Milk EPD (MAT) The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

Total Maternal EPD (TOTMAT) A value to predict the weaning weight performance of calves from a animal's daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding ½ the WWT EPD to the Maternal Milk EPD.

Scrotal Circumference EPD (SC) The expected difference in scrotal circumference (expressed in centimeters) of a bull's or dam's male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.

Carcass Weight EPD (HCW) Expected progeny differences for Carcass Weight is a predictor of pounds of retail product at a constant age endpoint. Selection for increased values should result in heavier carcasses, while selection for decreased values should result in lighter carcass weights at the same age endpoint. Carcass Weight EPD are expressed in pounds and is a predictor of the differences in hot carcass weight between parents progeny at an age constant endpoint.

Ribeye Area EPD (REA) Ribeye area is measured from a cross-sectional area of the longissimus dorsi muscle at the 12th rib. Ribeye area is a major component of the USDA yield grade equation and selection for increased ribeye area should result in larger ribeyes and lower yield grades between animals with the same carcass weight. Ribeye area has a positive relationship with weight, the larger the animal the larger the ribeye area. Ribeye Area EPD are expressed in square inches and is a predictor of differences in ribeye area between parents progeny at a constant age endpoint.

Fat Thickness EPD (FAT) Fat thickness is measured at the 12th rib and is the primary component to the USDA Yield Grade equation. Fat thickness has a negative relationship to cutability; therefore, selection base on decreased fat thickness should result in lower yield grades and leaner cattle given the same age endpoint. Fat Thickness EPD are expressed in inches and are a predictor of differences in fat thickness between parent's progeny at an age constant endpoint.

Marbling Score (MARB) Marbling is a subjective measure of the amount of intramuscular fat in the ribeye muscle. Marbling score is the primary component of USDA Quality grade and selection for increased Marbling Score EPD should result in cattle with higher quality grades at the same age endpoints. Marbling score has a small genetic correlation with fat, therefore producers may select for increased marbling score EPD while not changing external fat thickness when cattle are harvested at the same age-constant endpoint. Marbling EPD is a prediction of the differences in the USDA subjective marbling score between parent's progeny at an age constant endpoint.

Youngest in the sale with a #9 WW. Half brother to a high seller a few years ago.

**The boys**

Open Heifers

These heifers were selected right out of the replacement pen. They are very fancy. One might even be able to pick a show prospect out of this pen. But I will leave that up to someone with the eye for that kind of thing. They will make excellent cows and are guaranteed to milk and raise a big calf come fall.
