## MOUNTAIN VIEW LOWLINES

**Mike and Tracy Huffman**  
11828 Dorchester Ct.  
Smithsburg, MD 21783  
301-465-0143

*Mike and Tracy have sold their farm and regretfully must  
liquidate their young Lowline cowherd featuring several  
young fullblood cows, many carrying the red gene,  
bred back to their red herdsire, Bess's Admiral, and the  
red-carrier herdsire, B & B Bulla. Only in a dispersal sale  
can you take home the very best cows in the herd. Don't  
miss this chance on some of the best red and fullblood  
genetics in the breed.*

Lot 42

## Perfect Heifer Bulls – Real-world cattle to solve real problems on your ranch.

A beautiful picture ... alive, unassisted, vigorous, 66# birth weight out of a fullblood Lowline bull.

Kirk Duff of Duff Cattle Co., Hobart, OK, in his spring 2014 Power Plus sale catalog:

"After many sleepless nights over the last 20-plus years of using multiple registered Angus sires, I finally came to the realization that there had to be a better way to calve heifers. Just like many of you, in order to minimize the loss of baby calves out of first-calf heifers, I lived with them. I would move them in close to the barn and check them round the clock night and day and be plum worn out by the time calving season was over.

"Three years ago, I finally decided there had to be a better solution to this madness. So I began a search for the best low maintenance, easy calving Angus genetics available to use on my virgin heifers. After countless hours and many miles, we came across some quality Lowline Angus. Over the last three years, the result has been very satisfying. Here at Power Plus, we have calved over 200 head of virgin heifers bred to Lowline Angus bulls. Additionally, we have supplied hundreds of straws of semen, and we also leased out numerous Lowline Angus bulls to several of our long-time commercial customers in order to test the results over a larger number of cattle in multiple states.

"We no longer bring our heifers up close to the barn to calve them; they stay out on grass just like the cows during calving. We only check them once a day to tag babies. Birth complications have been minimal, as the birth weights have ranged from 50 to 69 pounds. The calves are vigorous and grow very well. The two lines of Angus genetics are so distantly related, when mated together the result has added hybrid vigor.

"We have harvested over 100 head of the calves thus far. They have finished on 30% less feed and in considerably less days while also achieving a high percentage of Choice and Prime.

"How can you argue with that? Low birth, performance and tons of eye appeal."

**Use Lowline genetics to help reduce labor and improve efficiency.**

The NDSU Dickinson Research Extension Center has done extensive research on calving ease using Lowline bulls on first-calf heifers and on the performance of the resulting calves in the mainstream market. They then concentrated on studying halfblood (Moderator) Lowline females and

found they show an increase of 37% in pounds of beef (weaning weight) produced per acre when using Lowline Moderator females bred to Red Angus bulls. These slides are from Dr. Kris Ringwall's presentation on the research.
