3RD ANNUAL GENETIC OPPORTUNITY SALE

It is our pleasure and privilege to welcome you to the 3rd Annual Sandhills Red Select Genetic Opportunity Sale. We appreciate the opportunity to serve you and your genetic needs. We would like to especially thank our past customers and bidders for your support. Your loyalty and confidence in our programs is greatly appreciated.

The Sandhills Red Select Genetic Opportunity Sale is a concept and sale event that was born from common goals and philosophies. Each of the cooperators involved in this project has a desire to produce Red Angus bulls and females that are moderate in size, efficient in function and sound in structure in order to reduce the cost of production and improve profitability.

We are raising the Rancher's Kind. The Rancher's Kind simply embodies good honest bulls that work hard, are dependable and do their job well. This philosophy also embodies females that are moderate, fertile, easy keeping, structurally correct and soft in their disposition.

Hopefully, as you view each of our programs and have the opportunity to review and research the cattle that we will be offering for sale, you will see them as a balanced, efficient and functional set of animals aimed at improving your profitability. While there are genetic differences between all of the cooperators, we all share a similar vision of raising problem free genetically superior cattle.

The offering consists of a mixture of long-aged bulls, yearling bulls and commercial heifers. The bulls and heifers have been grown with sustainability in mind. You will not see mention of average daily gains in our catalog. This is by design. Our principles are based upon the ideal that seed-stock genetics are grown and developed and that structural integrity of an animal takes time to cultivate. We believe that a program focused on high performance in the development of seed-stock animals is only good for the operator marketing those animals, not the people purchasing them. When you look at the bulls in this offering, you will see red meat and muscle expression, not fat. Please take time to look through the entire catalog as there is quality spread throughout.

We made the decision this year to use DV Auction as an additional sales medium. The sale will be broadcast live on the internet and videos of the bulls and heifers will be available for your viewing prior to that at dvauction.com. We hope this use of technology provides greater options for you as you begin to make your selections and purchases this year.

Thank you for taking the time to attend and view our sale. Please feel free to contact any one of us with any questions that you may have. We look forward to visiting with you.

Sincerely,

The Members of Sandhills Red Select

GENERAL SALE INFORMATION

MONDAY, MARCH 26, 2012

1:30 p.m. CT, Valentine Livestock Market, Valentine, Nebraska

Cookies and rolls will be provided in the morning.

Complimentary lunch will be served starting at 12:00 p.m.

Cattle will sell in catalog order.

LIVESTOCK INSURANCE:

Insurance available through American Livestock Insurance,
TV Tommy Jones, agent (307) 632-5118

All purchases are the buyers' responsibility as soon as they are sold.

ACCOMMODATIONS:

Valentine's Niobrara Lodge (877) 376-3003 or (402) 376-3000
803 East Highway 20

Comfort Inn, 101 Main St. (402) 376-3300

Dunes Lodge & Suites, Highways 20 & 83 (402) 376-3131

Trade Winds Motel, East Highway 20 & 83 (402) 376-1600

GUARANTEE:

All bulls are guaranteed breeders and are guaranteed healthy on sale day. They will have passed a semen test and breeding soundness exam. Scrotal measurements will be available sale day. Bulls are guaranteed to be breeders during the first breeding season. Breeding season is defined as the 90-day period following the first turnout of the bulls. Individual breeders will work with customers on a case-by-case basis concerning guarantees.

DELIVERY AND LOAD-OUT:

We are offering free delivery to all points in the State of Nebraska. Delivery to other states will be at the lowest cost possible from the seller's base operation. Any state animal testing requirements will be at the expense of the buyer. Bulls not delivered by April 15 will incur a \$3-per-day feeding cost thereafter.

A \$50 credit will be offered for bulls taken home on sale day.

SIGHT UNSEEN PURCHASES:

We encourage you to utilize DV Auction, Inc. as a means to facilitate your absentee purchases. However, if you are unable to use this service, please feel free to contact any one of the respective breeders to accommodate your requests. Let us know your needs and budget range and we will work with honesty and integrity to help purchase the best possible bull on your behalf. If you are unsatisfied with the purchase, then you don't own the animals.

TERMS AND CONDITIONS:

- The Auctioneer will settle any disputes as to bids, and his decision on such matters will be final.
- All sales are cash in U.S. funds unless prior arrangements have been made with the sellers.
- Any announcements made on sale day take precedence over printed material.
- Health certificates will be furnished for shipment anywhere in the United States.
- Any death or injury after the animal is sold is at the buyers' risk.
- Anyone attending this sale attends at his/her own risk.
- A retained interest by the seller will be designated as such in the sale. The buyer receives full possession and full salvage value on all bulls with a retained ownership interest.
- All registered cattle sell under the suggested Sale Terms and Conditions set forth by the Red Angus Association of America.

SANDBUR RIDGE RED ANGUS

Ross and Lane Knott

BIRNIE RED ANGUS

Paul and Milissa Birnie, Oliver and Hunter

Welcome to the Third Annual Sandhills Red Select Production Sale. This introduction will sound a lot like last year. I have not changed the focus of my breeding program or my ideals because of some great new herd bull or a perceived market opportunity. My program could be classified as boring as I try to raise cattle that can do a little of everything pretty well.

My breeding program has stayed focused on all aspects of beef production from conception to consumption and includes female productivity, fertility and longevity. Our females are bred to have a moderate frame and high volume. The results of which are noticeable in the carcass ultrasound data that reflects 1.26 square inches of REA/CWT in the bulls we scanned this spring. This measurement mirrors the data from the 2011 bulls that average the same boring 1.26 inches. The genetics we are offering in this sale are predictable and dependable.

I hope you can attend our sale as all the breeders in this offering are dedicated to providing you with the best, most real cattle we can produce. We do not breed for the highest attainable EPD package and we do not subscribe to the bull of the month club promoted by so many breeders. I do not feed to attain big average daily gains or high yearling weights.

My focus will always be to raise reasonable-framed, forage-converting, high-fertility, low-maintenance, problem-free cattle, with a soft disposition. Not all of our cattle are there, which is why we are offering only the top end of our 2011 born bull calves. I am very confident that the bulls in this offering will do the things that are said they will do.

As you look through the catalog, you will find that my comments have not changed much from years past. Our program has not been altered and while everyone tries to predict what will change and modify accordingly like a pendulum swinging from side to side, I can assure you that my plan is to keep raising the same type and kind of cattle you see today, for years to come. Please stop by anytime. Lane and I would love to have you visit our place and show you our operation.

First of all, we want to take this opportunity to thank all of our past customers for their continued support and faith in our program. Without your loyalty and belief in us, we wouldn't be able to do what we love and we certainly don't take that for granted.

These introductions generally provide an opportunity for breeders to bestow great virtues to their prospective buyers in the way of superlatives, magnificence, superiority, and ultimately, hyperbole. I don't fault anyone for it. It's what competition in like markets entices one to do. One of the basic principles of marketing is to establish product differentiation in order to create perceived value that will outsell the competitor and capture more market share.

If current trends are any indication, then it seems safe to say that there is plenty of market share to be had in the Red Angus breed today. Red Angus influenced females continue to be priced at a premium in relation to their counterparts and early results from Red Angus bull sales have been excellent. With that being known, I don't feel the need to blow smoke. There's plenty of that to be found elsewhere in the beef industry.

Our focus is really pretty simple. We want to raise bulls that will make great cows. By great, I mean that they are sustainable with structural integrity, quiet dispositions and a body type that lends itself to efficiency, longevity and durability. They need to calve easy, wean a good calf and breed back year after year. This is a goal and a process and we won't get there over night. We aren't there yet, but this is the path that we have defined and we intend to walk it. Good cows will raise good calves and will do it longer with greater consistency.

The bulls and heifers that we are offering have subscribed to a complete herd health and vaccination program. Our bulls and heifers are developed. We don't aim to achieve extraordinary average daily gains while developing our cattle as we believe in adequate growth to maintain structure, durability and longevity. Our bulls are hard muscled with no excess cover, so you can see them for what they are. The bulls averaged about 2.75 lbs. of gain per head per day and the heifers were allowed to develop on a high roughage diet with some Wet Distiller's Grains which will allow them to easily adapt to your environment. We aren't chasing extremes. We are trying to build consistency in type, kind and structural integrity.

Thank you again for the opportunity to provide you with your genetics. We look forward to visiting with you on sale day. Visitors are welcome to stop by anytime.

CHOAT CATTLE CO.

Wayne and Jody Choat, Faith, Weston and Claire

Welcome to the third annual Sandhills Red Select Genetic Opportunity Sale. We are pleased to be providing our 2-year-old bulls in this sale. Thank you for your interest in our cattle program and the opportunity to be your seedstock supplier. If we've done our job and the bulls do theirs, we hope to see you return in the future.

Choat Cattle Company was formally established in 2003 when we purchased our first registered Red Angus breeding stock. Although the official organization was formed in the recent past, we've been raising cattle since 1988. That first group of 20 Hereford cows and a Charlois bull were replaced with Black Angus cattle that were then replaced by a sizeable herd of Red Angus cattle. We have brought in genetics from many different herds throughout the Midwest. Our goal has been to develop cows that are functional, fertile, with good disposition. We are in the process of continuous improvement with this goal in mind. We believe you will see this effort reflected in the bulls on this sale.

Our annual program consists of calving the majority of our calves in late April and early May in our calving pastures near St. Edward, NE. Once the calves have been vaccinated, most of the pairs are sent west to the Sandhills. When grass season ends in the fall, the cows and calves are brought back home to be weaned. The cows immediately go into the harvested cornstalks where they will stay until they begin calving. The calves go in to the yards and consume a high-roughage diet of alfalfa hay, corn silage and cracked corn. As the calves grow through the winter, we continually watch and evaluate their development. By March, we will have selected the bull calves that we will keep for this sale. As soon as the grass greens up, these yearling bulls head back out to pasture for the summer. As the fields are harvested in the fall, the bulls rough the winter in the stalks until late December. We then bring them back into the yards and begin selecting and preparing for this sale.

You'll find that we have not "pushed" these bulls to achieve incredible average daily weight gain. They are hard, not fat. They have been fertility tested and examined. All of them have a quiet disposition and are extremely easy to work with. They are in the right condition to leave this sale and go to work on your heifers or your cows in a few short weeks or months. Because our bull program is based upon a philosophy of slow development, we believe the very best bulls have been selected for this sale and they will work for you for several years.

Thank you for your continued interest in our cattle. Do not hesitate to call with any questions. We look forward to seeing you on sale day.

Wayne (402) 920-1419 • Dave (402) 981-1586
1311 Beaver St. • St. Edward, NE 68660-4481

COOKSLEY RED ANGUS

Ben and Jilleen Cooksley, Ryan, Colin and Claire

As another bull sale approaches, I take a look back at the previous year and say it was the best yet! Jilleen completed her odyssey to become a RN and we got her back to doing what she loves to do. Ryan, Claire, and Colin keep us all busy with 4H, football, baseball/softball, basketball on top of all the regular activities that are required of a 6th a 3rd and a kindergartner. With ranching, coaching and sneaking in a goose hunt whenever possible, I seem to stay busy.

Cooksley Red Angus was started in 1989 by Stuart and Cynthia Cooksley with the purchase of 40 heifers from Jerry Teahon and a Coppertop Chief 301 son from Ole Redland. We started this herd with one goal in mind, raising Sandhills adapted Red Angus bulls for our own use. Currently we are using several 5L Blazin Ram sons as they are moderate and easy fleshing. Our breeding program is focused on disposition, calving ease, low maintenance, growth, and eye appeal.

Our cows calve in August after our commercial cows are done. The cows are wintered through on minimum inputs. Calves are weaned in March. These calves are fed 3 lbs. distillers and hay until May. They forage on range until December at which time they are fed DDG, oats, corn and hay. The meadows that they winter on offer plenty of room to rough house and exercise. The bulls are hard and ready to cover the miles and the cows.

Our large commercial herd allows us to use a large number of our own bulls per year. We usually use a lot of bulls from new herd sires before they are offered for sale in any numbers. This allows us to be fairly sure of what we are offering. We don't have a lot of new hot sires, but what we have are good proven lines.

To our customers, past and present, thank you for your trust and we hope to serve you to your satisfaction. If you are new customers, come and look around as I believe on the Sandhills Red Select Sale you can find everything that is good about the Red Angus breed. I think there a bull here no matter what your criteria are. Call or stop by for a visit anytime.

BRUNS RED ANGUS

Kelly and Cindy Bruns, Cole and Kate

Bruns Red Angus is located in northeast Nebraska near Bloomfield. The ranch is operated by Kelly and Cindy Bruns along with children Cole and Kate. Grandpa Bruns lends a hand pretty much daily, if not helping work cattle or opening a gate, maybe just an ear to bounce ideas off of over a cup of coffee on a cold winter day. Thanks, Dad.

Our cows run on improved pastures and some native pastures in the summer and crop residue in the winter. What a wonderful winter it has been to utilize crop residue. There are a lot of calories out there when the cows can get to them. We expect our cows to work for us, therefore we prefer moderate framed – easy fleshing mommas that adapt to the environment. We have no place for big – hard doing cows in our world. The price of pasture these days won't allow for this. We also select for maternal traits and disposition. Calving season starts April 1st and is just about as good (but not quite) as Christmas to our kids. "Let's go tag calves" are the kids' favorite words and what a joy it is to have a group of cows that we can trust our kids with. Good disposition is a must!

Our calves are weaned on pasture across the fence from their mommas. For those of you who haven't tried this, I would encourage you to do so. What a stress free way of weaning. The bulls are then brought in and fed a diet of distillers, corn and grass hay. They are not pushed as hard as a lot of the industry pushes their bulls. Therefore they won't be as big at sale time, partially because of feed and partially because of age. However we feel these bulls will last longer and breed more cows. With the price of bulls today, one extra year out of a bull is a huge savings.

The youngest half of our bulls are kept home and run on pasture in the summer and then fed grass hay, distillers and corn until sale time the next year. They are sold as coming 2-year-old bulls. These bulls were bred and raised specifically for this purpose. Our coming two year old bulls have never seen a sale ring before and are not leftovers from the year before.

We welcome you to visit anytime and look forward to meeting you at the sale. We truly believe this sale is full of bulls that are the "ranchers kind."

Information about Osteopetrosis

Osteopetrosis, also known as Marble Bone, is a genetic defect that causes abnormalities to the development of the bone marrow cavity and brain, ultimately causing death.

Osteopetrosis has been reported in Hereford, Simmental, Red & Black Angus, and Holstein.

The inheritance pattern of Osteopetrosis is typical of most bovine genetic defects, in that it is homozygous recessive – meaning both parents must transmit one Osteopetrosis affected gene to the offspring in order for Osteopetrosis to be expressed. The inheritance pattern and probability of phenotypic expression of Osteopetrosis is identical to red/black hide color.

There is a 25% possibility that if two recessive carrier animals are mated that the recessive gene will express itself and result in a carrier animal and in turn, a dead calf. All of the known pedigree carriers in this sale have been tested in accordance with the guidelines set forth by the Red Angus Association of America. A carrier will transmit the OS gene to its progeny 50% of the time. Animals that are tested as carriers of the recessive gene are identified with the OSC label.

"Larry" as he is known at the Cooksley Ranch, was the mainstay herd sire from the day he stepped foot on the place. A black/red carrier, Larry has left behind a legacy of easy-keeping females and calving-ease bulls with great scope and dimension. Larry was put to rest this past year. Owned by Cooksley Red Angus and 5L Ranch.

733 is a red Blazin Ram son out of what I think is the best cow we have ever raised. 915 is a cow you wish you could have a whole herd of. She will out milk and perform cows with twice her size and EPDs. Her small frame and -8 ME really set her apart from most cows. She has raised another top 5 calf again, at 13 years old. The only calf bull or heifer we have ever let go of was a Sakic Bull to Wilde Ranch that was one of the high-selling bulls last year. Owned by Cooksley Red Angus.

60 COMMERCIAL OPEN HEIFERS

We are selling 60 head of commercial replacement heifer calves. They should weigh approximately 700 lbs. per head by sale day. These heifers are right out of the heart of our commercial herds. All of the heifers have been managed under a full herd health program. They have been developed on prairie hay and Wet Distiller's Grains in a manner that has allowed them to grow nice and slow and ultimately flourish in your environment. The heifers will sell in groups of no less than 5, with the option to purchase all from each respective consignor. We can help source trucking, if needed, but the buyer is responsible for trucking expense. Purchase these broody females and then select your calving-ease bulls from a Sandhills Red Select consignor.

A sample of the quality of the commercial heifers selling.

Has everyone noticed how all Red Angus breeders now have outcross pedigrees because it is very popular? Just because 1/8 of the pedigree has a Canadian breeder's prefix does not make it an outcross. The maternal side of the pedigree has a Bando 598 daughter with a 105.9 MPPA on 8 calves, out of Pen Power Play line-bred granddam with a 107.7 MPPA on 10 calves. The top of the pedigree gives you the very popular and very rare OCC Headliner 661H out of a cow that is a grand daughter of the great black bull, D H D Traveler 6807. This individual started out at 79 lbs., posted a WW Ratio of 113, YW Ratio of 104, IMF Ratio of 4.05 and REA Ratio of 105. Retaining 50% semen interest. This is out-cross.

1126 is the result of a brother-sister mating with a shot of Grand Canyon and Logan for good measure. This bull is currently being tested for OS and those results will be available on sale day. A calving-ease bull with this pedigree and cow power behind him makes for an interesting future in the cattle industry. Retaining 50% semen interest.

7	-2.3	16	34	26	35	0	10	2	10	0.16	-0.02	0.03

Calving-ease bull with a 106 IMF Ratio out of 14-year-old cow with a 104.1 MPPA on 12 calves. She has a BW ratio of 96 on those 12 and WW ratio of 105 on the same 12 calves and she had a 70-lb. AI calf on 2-14. 863 is a daughter of the F7 cow. F7 has a 101.2 MPPA on 13 calves with a BW ratio of 93 and a WW ratio of 101 on those 13 head. This spring she gave birth to a 64-lb. heifer calf, at age 16. The reason she missed a calving opportunity was because I held her open to flush a couple years ago. If you are in the cattle business for the long haul you need to try and purchase this bull. Retaining 50% semen interest.

I wondered why I was going to sell this bull when I put together my sale order, and I am still wondering as I write the comments about this April bull. His mother, 970, is an outstanding cow. She is dark red, moderate framed and has a wonderful temperament. 970 posts a 106.3 MPPA on 11 calves with a BW ratio of 95 and WW ratio of 107. The mother of 970 was 758, and she produced 11 calves with a 101.8 MPPA. The mother of 758 was 303, and she produced 12 calves with a 100.1 MPPA. I think you will be hard pressed to find many bulls selling this spring that come from this strong of a cow family. I flushed 970 this winter and she is bred back to have a calf in the fall of 2012. If no one wants to bid on this bull I will be happy to take him back home with me! Retaining 50% semen interest.

1010 is a very well-rounded bull with a lot of shape and style. He is backed by the maternal strength of the Lakota cow family heralding from Milk Creek Reds. His dam is a first-calf heifer that we purchased as a yearling from Sandbur Ridge. Her granddam, 651, raised 11 calves naturally and her great granddam raised 12 calves naturally before they each entered into embryo programs. 651 recently had her 12th natural calf at age 16. We love this kind of longevity. 1010 does have a non-disqualifying birthmark on his neck.

We are really excited to be offering the first progeny out of our Milk Crk Express 9127 bull. We only wish we had more calving-ease specialists like this to offer. 9127 has the unique ability to start with low birth weights, accelerate to weaning and then decelerate to an acceptable yearling weight. We believe this is going to help keep mature cow weights in check without sacrificing early weaning weights.
