Complimentary Lunch by Unison Bank & Hubbard Feeds.

Delivery and Feeding: Free delivery up to 200 miles after that we will work with you to keep the cost down. Or bring your trailer and deduct \$30 per bull. We will deliver the bulls right after the sale. If you wish we take them home and feed them for awhile, we can for \$3 a day.

Absentee Bids: We can handle any bids either on the phone or in strict confidence. Please call before the sale to set this up.

Guarantee: Unconditional guarantee goes along with these cattle. If there is a problem, we will fix it!

Semen Test: Bulls have not been semen tested but they are fully guaranteed. We advise to test the bulls at a later date. If a problem were to arise, we will stand behind the bulls 100% and we will either replace the bull or give credit for next year's sale.

Registration: All bulls and females are registered. Papers will be transferred at the seller's expense.

Herd Health: Any health papers that need to be issued can be done so by a veterinarian.

Terms: Cash or checks will be accepted.

Liabilities: Anyone attending the sale will do so at their own risk.

Volume Discounts: Discount of \$300 will be given on the fourth bull purchased by the same ranch.

Understanding EPDs: Explanation on inside back cover.

Please join us for after-sale hospitality!

You can watch the LIVE! Go to napoleonlivestock.com and click on the Live Auction tab.

If you want to bid, you will need to register prior to the sale. It's easy to do and they will walk you through it.

Welcome

Curtis, Troy, Heather & Laurie Brown

Welcome to our Annual Production sale.

We are very proud of the offering we bring you this year. When we select our herdsires, we keep in mind the people that are using the progeny out of these bulls. With that being said, we feel this set of bulls will do an excellent job on your future plans of selling the best set of Char-cross calves you have ever sold.

These bulls excel in eye appeal and performance. We never select a herdbull only on one trait – he needs to excel in multiple traits. Our fall yearlings are very impressive with the entire group sired by Top Shelf. They are a very good set of bulls which will allow you to buy multiple half brothers for more uniformity in your calf crop. These bulls will be able to handle heavier service also.

The yearlings are a very powerful group this year. They are thick with good length and very attractive in their making. These bulls are bred for calving ease with performance bred in to raise progeny that will excel in growth to bring the top dollar at sale day.

Again this year we will have in the offering a group of Red Angus-cross first-calf heifer pairs with Char-cross calves at side. These pairs are of top quality stock with an exceptional set of calves. The open heifers in the sale are from our replacement pen and we are confident they will go out and perform their best in anyone's herd.

We take pride in the cattle we are offering this year and we hope you can take the time to come and look through the cattle and find some of the best seedstock available this season to use in your herd. We have always stressed that we are here after the sale, for we want satisfied customers and will do our best to achieve that goal. Please join us on Mar. 26th at 5:30 p.m. We will be serving a meal before the sale so come early. Thank you for your interest in our cattle.

Sincerely,

Curtis Brown

Our main herdsire that just keeps on ticking. Makes them good and makes them full of meat. And is making some nice females too, besides what his Milk EPDs say. His progeny are being well accepted by top commercial cattlemen. Very attractive and easy-fleshing progeny.

High seller at BHSS. His calves have come along very nice. The older they get, the more I like them. His progeny will be appealing to most.

JAB Hedge Hog 995 PLD

Commercial Females

We will be selling 30 Red Angus-cross first-calf heifers with Charolais-cross calves at side. The calves were all born the first three weeks of February. All the calves are sired by LT Bluegrass sons.

These heifers were purchased from reputable herds in the area.

All females had Dectomax and a 7-way shot on 11-01-2012.

Will be selling gate cut on 5 or more. Calves are tagged to match their dams.

A sample of the commercial females offered in this year's sale.

*Jon and Curtis
We miss our uncle & brother-in-law.*

Out of a real good young cow that has a good one every year.

1132

Fall bulls birthweights will all read 90 lbs. from the AICA, cause they need some kind of weight to put in their adjustments. The fall cows are calved in a quarter of pasture 2 miles from the ranch. We don't weigh them at birth for that reason. They generally run lighter than the spring.

Youngest bull in the sale which should work on heifers, that is a good looking animal.

Troy and Jess

Open Heifers

These heifers were selected right out of the replacement pen. They are very fancy. One might even be able to pick a show prospect out of this pen. But I will leave that up to someone with the eye for that kind of thing. They will make excellent cows and are guaranteed to milk and raise a big calf come fall.

AICA EPD Guide

Calving Ease Direct (CE) is expressed as a difference in percentage of unassisted births in first calf heifers. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's calves will be born when bred to first-calf heifers.

Birth Weight EPD (BW) The expected difference in average birth weight (pounds) of progeny. Birth weight reflects prenatal growth.

Calving Ease Maternal (MCE) is expressed as a difference in percentage of unassisted births in first calf daughters. A higher value indicates greater calving ease. It predicts the average difference in unassisted births with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Weaning Weight EPD (WWT) The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

Yearling Weight EPD (YWT) The expected difference in average yearling weight of progeny. The evaluation reflects genetic influence on both pre-weaning and post-weaning growth rate.

Maternal Milk EPD (MAT) The genetic ability of a sire's or dam's daughters to express in pounds of weaning weight in her calves due to her maternal ability through mothering instinct and milk.

Total Maternal EPD (TOTMAT) A value to predict the weaning weight performance of calves from a animal's daughters due to genetics for growth and maternal ability. Total Maternal is calculated by adding $\frac{1}{2}$ the WWT EPD to the Maternal Milk EPD.

Scrotal Circumference EPD (SC) The expected difference in scrotal circumference (expressed in centimeters) of a bull's or dam's male offspring at yearling compared to progeny of all other animals evaluated. Research has also indicated a relationship between increased SC EPD and decreased age at puberty for daughters.

Carcass Weight EPD (HCW) Expected progeny differences for Carcass Weight is a predictor of pounds of retail product at a constant age endpoint. Selection for increased values should result in heavier carcasses, while selection for decreased values should result in lighter carcass weights at the same age endpoint. Carcass Weight EPD are expressed in pounds and is a predictor of the differences in hot carcass weight between parents progeny at an age constant endpoint.

Ribeye Area EPD (REA) Ribeye area is measured from a cross-sectional area of the longissimus dorsi muscle at the 12th rib. Ribeye area is a major component of the USDA yield grade equation and selection for increased ribeye area should result in larger ribeyes and lower yield grades between animals with the same carcass weight. Ribeye area has a positive relationship with weight, the larger the animal the larger the ribeye area. Ribeye Area EPD are expressed in square inches and is a predictor of differences in ribeye area between parents progeny at a constant age endpoint.

Fat Thickness EPD (FAT) Fat thickness is measured at the 12th rib and is the primary component to the USDA Yield Grade equation. Fat thickness has a negative relationship to cutability; therefore, selection base on decreased fat thickness should result in lower yield grades and leaner cattle given the same age endpoint. Fat Thickness EPD are expressed in inches and are a predictor of differences in fat thickness between parent's progeny at an age constant endpoint.

Marbling Score (MARB) Marbling is a subjective measure of the amount of intramuscular fat in the ribeye muscle. Marbling score is the primary component of USDA Quality grade and selection for increased Marbling Score EPD should result in cattle with higher quality grades at the same age endpoints. Marbling score has a small genetic correlation with fat, therefore producers may select for increased marbling score EPD while not changing external fat thickness when cattle are harvested at the same age-constant endpoint. Marbling EPD is a prediction of the differences in the USDA subjective marbling score between parent's progeny at an age constant endpoint.
