Over Three Decades

of Breeding Gelbvieh Seedstock

Lot 3 – DDGR CINCH 11C

Lot 44 – DDGR FOUNDATION 107C

Lot 52 – DDGR INNOVATION 120C

Lot 62 – DDGR KINGPIN 159C

The Gustin Crew ...

(L to R) Steve and Katie Stensgard, Lauren and Isaac, Dennis and Sherry, Jessica Gustin, Sarah and Richie Heinrich

Al and Peg Gustin

Steve and Kim Barnhardt
Brittany, Bailey, Bradley and Bellany

Steve Barnhardt continues to be a valued member of the Gustin's Diamond D Gelbvieh team. We greatly appreciate his expertise in handling the cattle as well as his trucking and repair skills. Thanks, Steve, for your dedication and hard work.

Sale Auctioneer: Jay Elfeldt, Sutherland, Nebraska • (308) 293-3049

Catalog designed by Tracey Koester • Cow Camp Promotions • www.cowcamppromotions.com

Printed by United Printing • 701-223-0505

Greetings,

Thank you for your interest in our program; and welcome to our annual production sale. We have been breeding Gelbvieh cattle for 33 years and continue to be thankful for the support of the great people that we have been associated with in this business.

Our goal continues to be to provide you with the best Gelbvieh and Balancer genetics available. We believe the Gelbvieh breed offers the best combination of disposition, maternal excellence and growth of any breed.

Our catalog, videos of each sale lot, and the sale order will be posted on our website as they were last year. All bulls will have homozygous polled and homozygous black test results, adjusted yearling weights and scrotal measurements available online and on sale day. Please call or come early to select your bulls

Again, thank you for your continued interest and confidence in our breeding program. Give us a call, visit our website at www.gustinsdiamondd.com or e-mail us at gustindd@wildblue.net for information or a catalog. We enjoy visiting with you about your program and will do our best to assist you in making your selections. We look forward to seeing you on sale day.

Our Program

We are firm believers in balanced trait selection, putting emphasis on many different areas including disposition, calving ease, performance, maternal traits, structural soundness, eye appeal, EPDs and carcass traits. We believe that by not creep feeding we are better able to select our replacement females; and feel we are on the right track as our first-calf heifers continue to put a larger number of high quality calves in the sale each year.

The calves have been doing great since weaning. We continue to feed a total mixed ration of homegrown feeds and distillers grain for a moderate 3.25 to 3.5 pound average daily gain after weaning. This will keep the bulls sound and maintain longevity.

Something to Watch For

Watch for Dams of Merit and Dams of Distinction in the footnotes. These are high-producing cows identified by the AGA. Fewer than 5% of Gelbvieh cows achieve Dam of Merit status; and fewer than 1% achieve Dam of Distinction status. Our herd ranks 6th in the nation for these outstanding females.

Schedule and Terms

The sale schedule will run the same as last year. At 10:30 a.m. the bulls will be penned for viewing and the complimentary lunch will be served at noon. The sale will be at 1:00 p.m. in the heated sale barn, with telephone and DV Auction bidding available for those unable to attend.

Insurance

Insurance on your purchases will be available on sale day. If you would like to protect your investment you can take advantage of this service.

Guarantees

All bulls will have a first-season breeding guarantee, and as always, we guarantee satisfaction on all sight-unseen purchases.

Payment and Delivery

We will deduct \$50 off the purchase price of any bull taken home on sale day or buyers can pay half on sale day and we will feed the bulls free until April 1. After April 1, there will be a \$2/day feed charge. Heifers need to be paid in full on sale day and picked up within one week after the sale. Please let us know if we can assist you with these services.

Liability

All persons attending this sale do so at their own risk. Gustins Diamond D Gelbvieh assumes no responsibility for accidents, theft or damages done during this event.

DVAuction

Broadcasting Real-Time Auctions

View the Auction Live! Bid Online... you're ringside right at your desk!

Buying online is as easy as 1, 2, 3...

1. Create an account at www.dvauction.com under the "register" tab
2. Apply for bidding approval by clicking on the "details" tab at least 24 hours prior to the auction-a DV representative will notify you once you have been approved
3. Tune in for the sale and make your purchases!

High speed internet is required for successful bidding-be sure to check the lag-time monitor in the top left corner to ensure real-time broadcasts.

Proxy Bidding-if you can't make time to watch the sale, register a proxy bid and let our system represent your bid while you're away. Look for the "proxy bid" tab on the auction listing, and fill in your maximum bids. We'll handle the rest!

Having troubles? During the auction, you can type a message to the operator at any time for assistance. Our full-time support team can also always be reached at (402) 474-5557.

Please feel free to contact me with questions about the sale or to view the cattle for you.

FEEDER *Finder*

The source to find Gelbvieh and Balancer[®] influenced feeder cattle

The American Gelbvieh Association's Feeder Finder service assists producers in marketing load lots of Gelbvieh and Balancer[®]-influenced feeder cattle. Whether selling private treaty or via auction, producers with load lots of feeder cattle are encouraged to fill out the free Feeder Finder form. These cattle are then listed on the AGA website and presented to feedyards across the country.

**Contact William McIntosh at 502-867-3132 or
Angela Vesco at 303-465-2333
to list your cattle on Feeder Finder.**

As a valued customer of Gelbvieh influenced calves, you are eligible to list your calves on the American Gelbvieh Association's "Feeder Finder."

Simply list your calves with a brief description of your cattle and the listing will be sent to over 200 feedlots across the United States. All listings must be in load lots, so if you don't have enough calves to fill a semi load, consider teaming up with a neighbor who has Gelbvieh-influenced calves.

Just another way the AGA is helping to add value to your program.

\$ Smart Select Service

Genetic Tools for Ranchers

Gustin's Diamond D will offer a voucher for \$50 with the purchase of one bull or \$100 with the purchase of two or more bulls toward enrolling your herd in the Smart Select program if you wish to do so.

How well do you really know your cows? Get to know them better through Smart Select Service. Smart Select Service is an online record management database that gives the commercial producer, regardless of breed, genetic tools generated from their cows' records. These tools can then be used to make sound breeding decisions that will identify the cows that will increase herd productivity and profitability.

Herd Reports:

- Progeny Report
- Herd Sires Report
- Dam Production Report
- Herd Summary Report

Genetic Tools:

- Feeder Profit Index (FPI): Index for selecting progeny to perform in the feedyard and on the rail.
- Stayability (ST score): Gauge the reproductive longevity of the herd.

The American Gelbvieh Association is continually working to enhance the breed in all sectors of the industry. The AGA is currently providing the "Smart Select Service" to all producers that use Gelbvieh Genetics in their herds. Ranchers provide information on their cows including breeding dates and expected calving dates of cows, and weaning information about the calves. This service will help you keep records of your cows on a yearly basis, while adding information to the breed data base nationwide. The cost is \$1/head.

8	1.6	89	126	20	65	10	-0.13	46	0.42	-0.33	-0.06	70.26

This Post Rock Captain Daughter has some impressive numbers with her WW and YW EPDs landing her in the top 2% of the breed. She's carrying an AI balancer bull calf sired by Connealy In Focus 4925. She's due March 8th.

EXPECTED PROGENY DIFFERENCES (EPDs) can be used to predict the average performance of bull's offspring compared to other calves in their contemporary group (a contemporary group being calves that were born in the same calving season, in the same year, herd, sex, and were managed similarly).

EPDs are measured in the units of the trait, and show the differences in performance between animals. For example, if a bull has a weaning weight EPD of 80, and another bull in the same herd has a weaning weight EPD of 70, then bull A's calves would be expected to be 10 pounds heavier at weaning than those of bull B.

It is important to remember that this number is just a prediction of performance. Actual performance depends on many factors such as environment, management, etc. This being said, an EPD is by far the most reliable indicator of an animal's genetic merit due to the amount of information incorporated into the calculation.

The American Gelbvieh Association uses all available information to predict an animal's EPD. This information includes: individual performance, pedigree, progeny and grand progeny performance, plus available genomic information. All this information is combined into one easy to use number that helps breeders make genetic improvement in their herd.

EPD DEFINITIONS

Listed below are the definitions of American Gelbvieh Association EPDs and the units in which they are published. The EPDs with an asterisk (*) next to the name are available to members only.

Maternal traits

Calving ease direct (CE): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

Milk (Milk): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Calving ease maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease. This EPD is important to a rancher's bottom line because it predicts which animals produce daughters with a genetic pre-disposition to calve unassisted as heifers.

Growth traits

Birth weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

Carcass traits

Yield grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint.

Ribeye area (REA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areas are preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib, smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

WHAT IS AN INDEX?

Indexes are tools that allow you to select for several EPDs at once, making selections more efficient than selecting on one trait at a time. Indexes weigh traits based on their importance to a producer's bottom line by using a trait's economic and genetic value. Indexes are a good way to put selection emphasis on traits that are economically relevant.

Total maternal (TM): An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. As an index, this value is not reported with an accompanying accuracy. A greater TM value means a mother that returns comparatively higher weaning weights on her calves. $TM \text{ Index} = MK \text{ EPD} + \frac{1}{2} WW \text{ EPD}$.

Feeder profit index (FPI): An economic selection index designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on grade and yield. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries.

As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.
